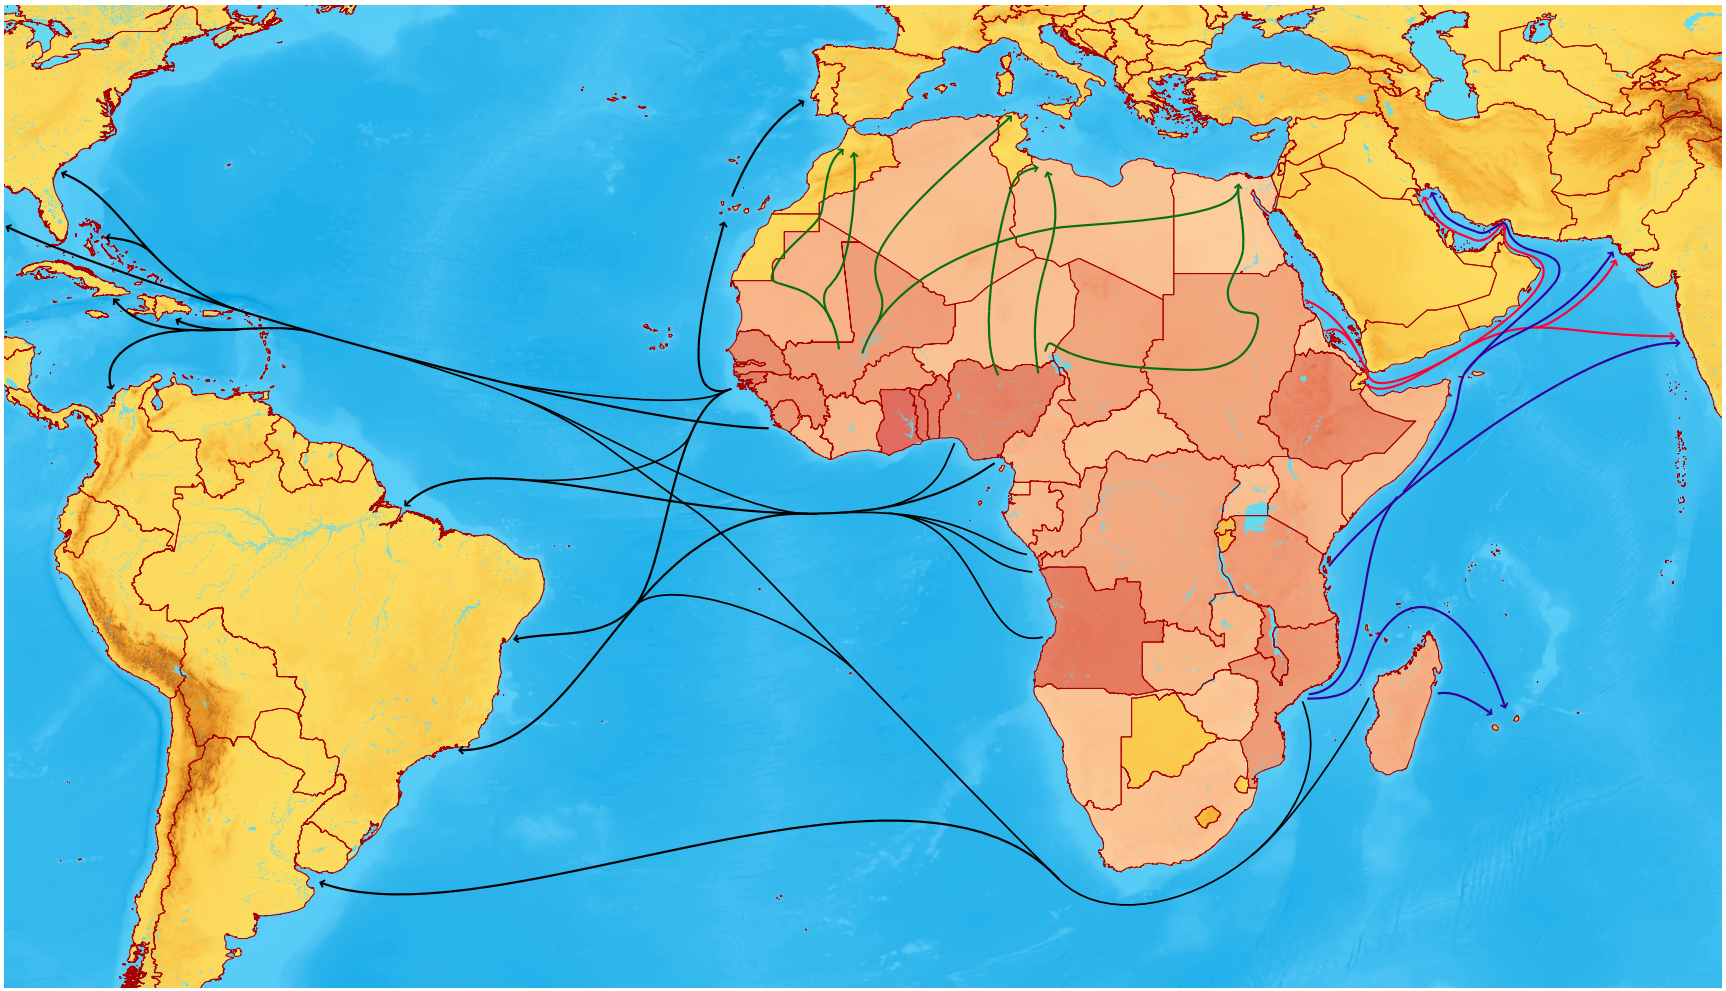
Empirical Evidence on the Long-Term Impacts of Africa's Slave Trades

Nathan Nunn, Harvard University

October 7, 2011

Overview

- Nunn (QJE, 2008):
  - Using cross-country data, examines the impact of Africa's four slave trades on long-term economic development.
- Nunn and Wantchekon (AER, forthcoming)
  - Using individual-level data, examines the impact of the Indian Ocean and trans-Atlantic slave trades on interpersonal trust.



Magnitude of the Slave Trades

Slave Trade	1400–1599	1600–1699	1700–1799	1800–1913	1400–1913
trans-Atlantic	188,108	597,444	8,253,885	3,709,081	12,748,518
trans-Saharan	700,000	435,000	865,000	1,066,143	3,066,143
Red Sea	400,000	200,000	200,000	505,400	1,305,400
Indian Ocean	200,000	100,000	428,000	395,300	1,123,300
Total	1,488,108	1,332,444	9,746,885	5,675,924	18,243,361
Total/year	7,441	13,324	97,469	50,230	35,562

Potential Impacts of the Slave Trades

- Qualitative historical evidence of detrimental impacts
  - E.g., Joseph Inikori (2000, 2003); Linda Heywood (JAH, 2009)
- Deterioration of property rights and the rule of law
  - Rise of warlords and militarization of the continent.
  - Increase in conflicts between ethnicities.
  - Increase in local kidnapping, raiding and banditry.
- Weakening and fragmentation of states
  - Political fragmentation and instability.
  - Break-down of traditional judicial systems as legal system is used for enslavement.

Complementary (Empirical) Evidence?

- Natural questions that arise:
  - Are the examples examined (e.g., Kongo Kingdom) representative or are they exceptional?
  - What is the *average* impact for the continent as a whole?
  - Do these impacts persist until today?
  - Can they explain part of Africa's underdevelopment relative to the rest of the world?
- A quantitative approach is able to help shed light on these questions.

Data Sources: Shipping Records

- Atlantic slave trade:
  - Updated *Trans-Atlantic Slave Trade Database* constructed by Eltis, Behrendt, Richardson, and Klein and from Elbl (1997).
- Indian Ocean, Red Sea and Trans-Saharan slave trades:
  - Martin and Ryan (1977), Austen (1979, 1988, 1992), and Lovejoy (2000).

Data Sources: Ethnicity Data

- Atlantic slave trade.
  - 54 samples, 80,656 slaves, 229 ethnicities
- Indian Ocean slave trade.
  - 6 samples, 21,048 slaves, 80 ethnicities
- Saharan slave trade.
  - 2 samples, 5,385 slaves, 23 ethnicities
- Red Sea slave trade.
  - 2 samples, 67 slaves, 32 ethnicities

Table 1: Slave Ethnicity Data: Trans-Atlantic Slave Trade, 1450–1799

Region	Years	Num. Ethnic.	Num. Obs.	Record Type
Valencia, Spain	1482–1516	77	2,675	Crown Records
Puebla, Mexico	1540-1556	14	115	Notarial Records

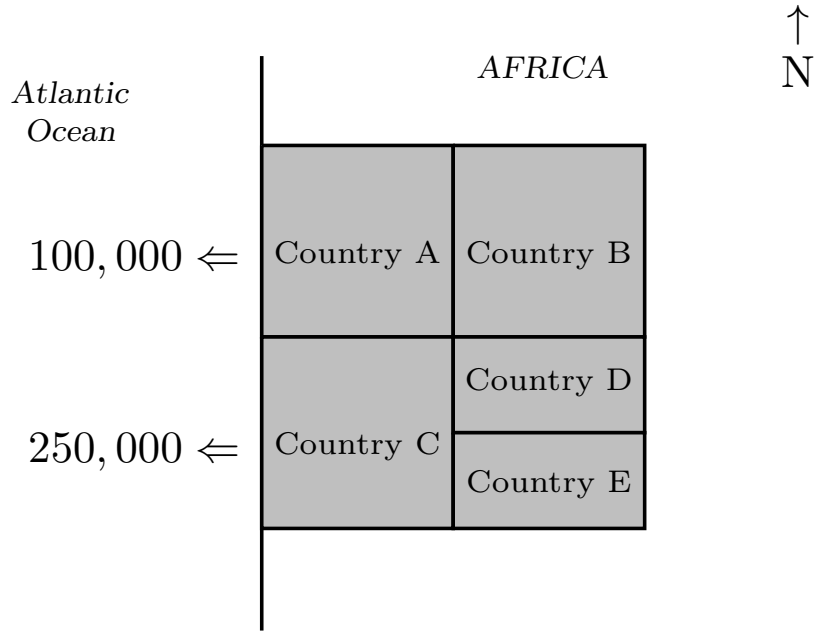
the 30th April 1896

Basil S. Cave
H. M. Consul
for H. M's. Agent & Consul General,
Zanzibar.

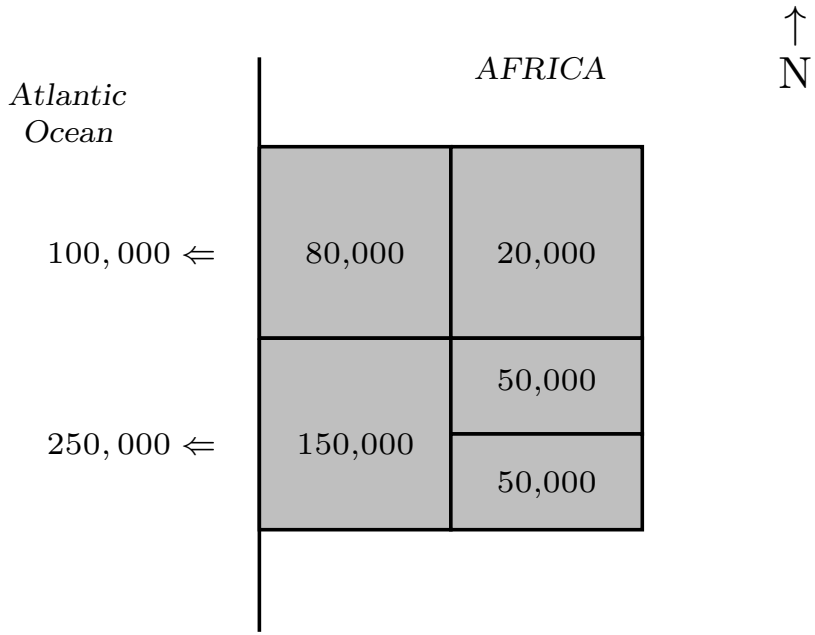
Constructing Estimates



From the ethnicity data, I calculate:

$$\text{A} : \text{B} = 4 : 1$$
$$\text{C} : \text{D} : \text{E} = 3 : 1 : 1$$

Calculations



$$\text{A}= 100,000 \times 4/5 = 80,000$$
$$\text{B}= 100,000 \times 1/5 = 20,000$$
$$\text{C}= 250,000 \times 3/5 = 150,000$$
$$\text{D}= 250,000 \times 1/5 = 50,000$$
$$\text{E}= 250,000 \times 1/5 = 50,000$$

Table 3: Estimated slave exports from 1400 to 1900. Top 20 countries.

Country name	Trans-Atlantic	Indian Ocean	Trans-Saharan	Red Sea	Total in all slave trades

Causality and Selection

- The concern is that these correlations are completely spurious.
- There is some characteristic (e.g., initial underdevelopment) that:
  1. Caused areas to export more slaves.
  2. Adversely affects development today.
- If this is the case, then we would observe a statistical relationship between the slave trade and development today even if the slave trade *did not* have a causal effect.

Nunn and Wantchekon (AER, forthcoming)

- Examine finer variation at the individual/ethnicity level.
- We find evidence that:
  - Individuals with ancestors exposed to the slave trades are less trusting of those around them today.
  - This is both because the formal institutions around them are worse (and so people are less trustworthy), but also because they have developed norms of mistrust.

Fon Saying

- "*Me elo na sa we du*".
- "This person will sell you and eat the money".
- Or less literally, "this person will sell you and enjoy it".
- The saying is also used to describe someone who is deceitful and capable of something awful.

Table 1. The Method of Enslavement of Koelle's Informants

Manner of Enslavement	Percentage
Taken in a war	24.3%
Kidnapped or seized	40.3%
Sold/tricked by a relative, friend, etc.	19.4%
Through a judicial process	16.0%

Notes: The data are from Sigismund Koelle's Linguistic Inventory. The sample consists of 144 informants interviewed by Koelle for which their means of enslavement is known.

Manner of Enslavement: Examples

- Sold/tricked by a relative, friend, etc:
  - "sold by his relatives"
  - "sold by his family"
  - "sold by his brother because they could not agree"
  - "sold by a supposed friend"
  - "a treacherous friend enticed him on board a Portuguese vessel"
- Through the judicial system:
  - "sold by the king on account of slaying a man"
  - "sold on account of his family being accused of occasioning the king's death by means of witchcraft"
  - "sold on account of his sister being accused of witchcraft"
  - "sold on account of adultery"

Cross Country Trust Comparison from the World Values Surveys

	In general, how much do you trust people from your country?							
Response	Nigeria		South Africa		United States		Mexico	
Not trust at all	238	24%	597	23%	15	1%	29	2%
Not trust very much	255	26%	490	19%	81	4%	91	6%
Neither trust nor distrust	101	10%	840	32%	376	21%	337	22%
Trust a little	330	33%	433	16%	955	53%	683	45%
Trust completely	62	6%	278	11%	382	21%	377	25%
Total	986	100%	2,638	100%	1,809	100%	1,517	100%

Notes : Data are from the World Values Survery 1990. The exact question asked in each survey is: "Using the responses on this card, could you tell me how much you trust <Nationality> people in general?"

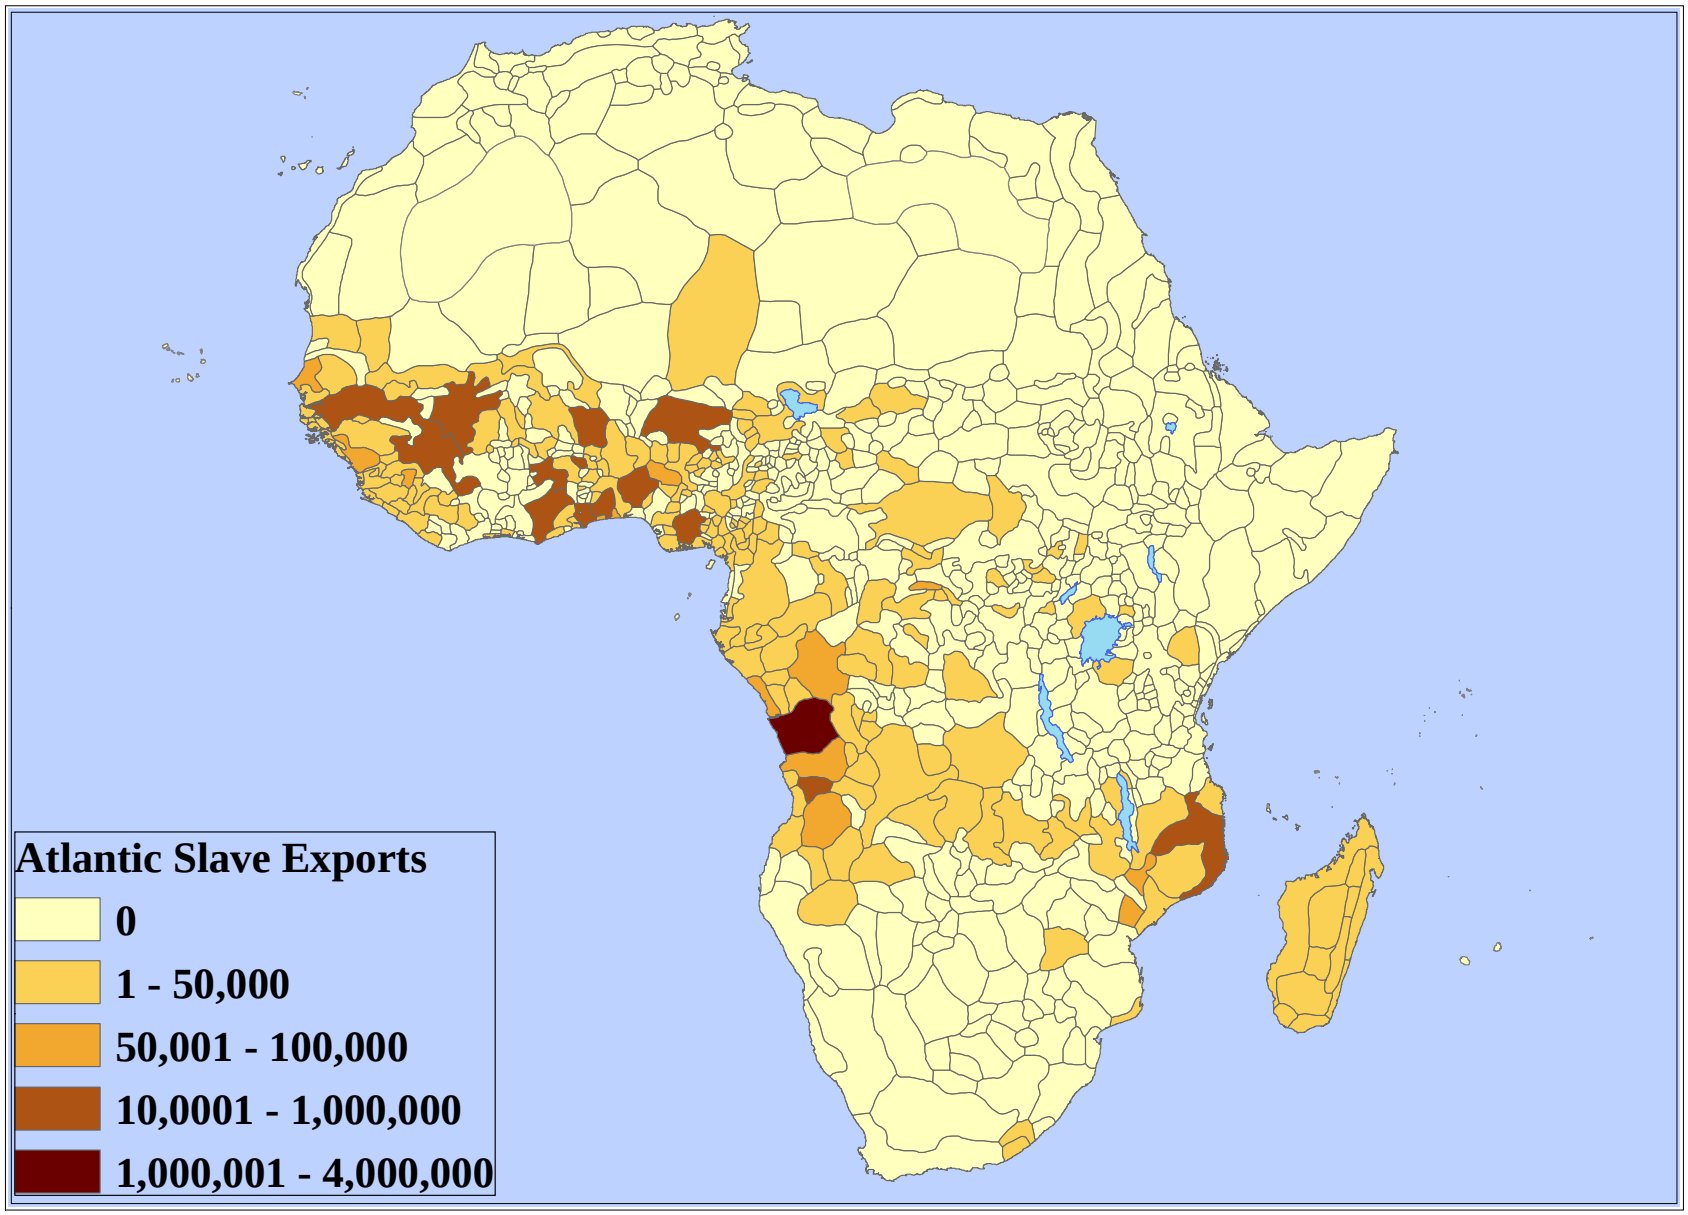
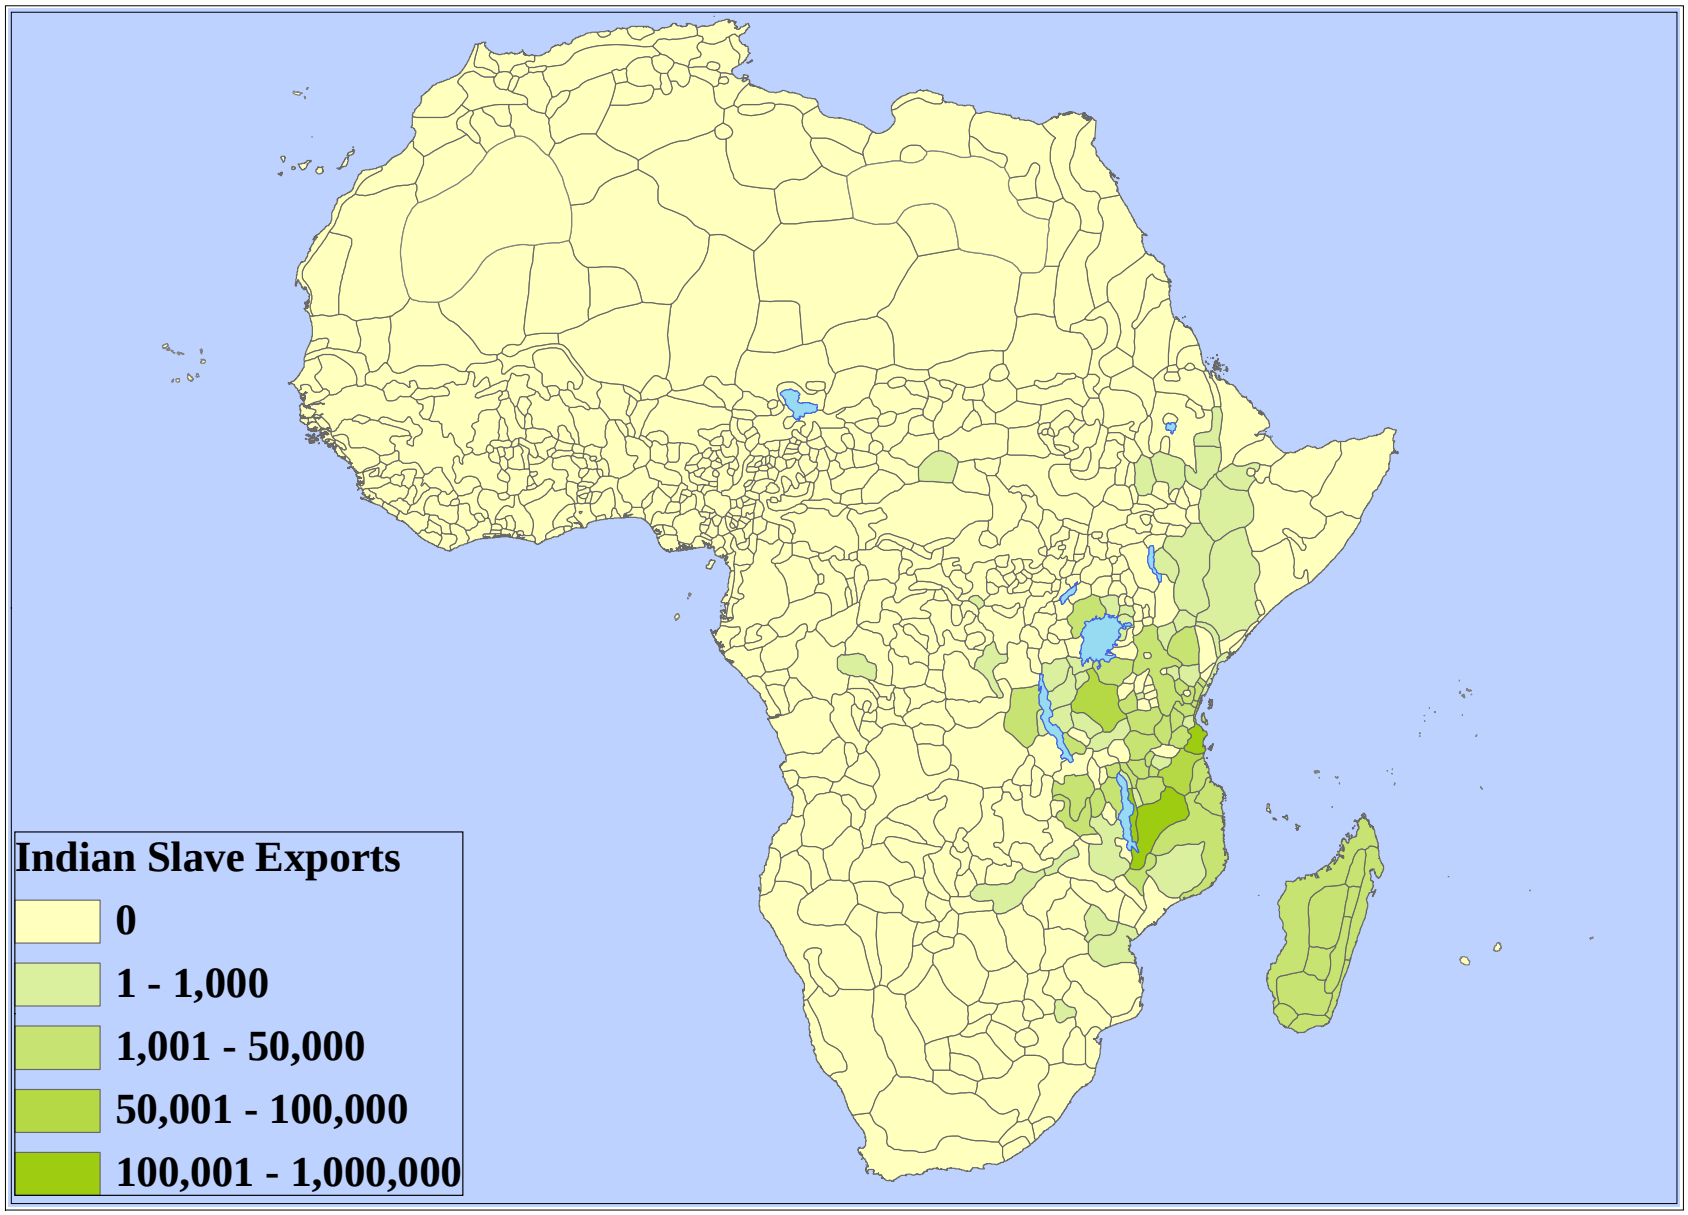
	How much do you trust each of the following:									
Response	Your relatives?		Your neighbors?		Your elected local government council?		People from your own ethnic group or tribe?		People from other ethnic groups?	
Not at all	1,412	7%	2,719	13%	3,981	20%	2,797	14%	4,471	22%
Just a little	3,705	18%	5,770	28%	4,869	24%	6,304	31%	7,278	36%
Somewhat	5,154	25%	6,317	31%	5,314	26%	6,119	30%	5,266	26%
A lot	10,357	50%	5,774	28%	6,046	30%	5,282	26%	3,286	16%
Total	20,628	100%	20,580	100%	20,210	100%	20,502	100%	20,301	100%

Notes: The table reports summary statistics for five measures of trust from the 2005 Afrobarometer survey. The four interpersonal trust questions are from questions 84a to 84d in the survey. The trust in the locally elected government council is from question 55d. Respondents also have the option of answering "Don't know". The number of respondents answering this to each of the five question (in order from the left to right column) are: 43, 80, 159, 357, and 1,491.



Atlantic Slave Exports
0
1 - 50,000
50,001 - 100,000
10,0001 - 1,000,000
1,000,001 - 4,000,000



Indian Slave Exports
0
1 - 1,000
1,001 - 50,000
50,001 - 100,000
100,001 - 1,000,000

	Trust of relatives	Trust of neighbors	Trust of local council	Intra-group trust	Inter-group trust
	(1)	(2)	(3)	(4)	(5)

	(0.032)	(0.031)	(0.022)	(0.033)	(0.030)
Colonial population density	Yes	Yes	Yes	Yes	Yes
Ethnicity-level colonial controls	Yes	Yes	Yes	Yes	Yes
Individual controls	Yes	Yes	Yes	Yes	Yes
District controls	Yes	Yes	Yes	Yes	Yes
Country fixed effects	Yes	Yes	Yes	Yes	Yes
Number of observations	16,709	16,679	15,905	16,636	16,473
Number of ethnicity clusters	147	147	146	147	147
Number of district clusters	1,187	1,187	1,194	1,186	1,184
R-squared	0.13	0.16	0.21	0.16	0.12

Notes: The table reports OLS estimates. The unit of observation is an individual. Standard errors are adjusted for two-way clustering at the ethnicity and district levels. The individual controls are for age, age squared, a gender indicator variable, 5 living conditions fixed effects, 10 education fixed effects, 18 religion fixed effects, 25 occupation fixed effects, and an indicator for whether the respondent lives in an urban location. The district controls include ethnic fractionalization in the district and the share of the district's population that is the same ethnicity as the respondent. Ethnicity-level colonial controls include the prevalence of malaria, a 1400 urbanization indicator variable, 8 fixed effects for the sophistication of pre-colonial settlement, the number of jurisdicational political hierarchies beyond the local community in the pre-colonial period, an indicator for integration with the colonial rail network, an indicator for contact with pre-colonial European explorers, and the number of missions per square kilometer during colonial rule. Colonial population density is the natural log of an ethnicity's population density during the colonial period. ***, ** and * indicate significance at the 1, 5 and 10% level.

Evidence without Historical Data I

	Trust of local government council			
	Afrobarometer sample		Asiabarometer sample	
	(1)	(2)	(3)	(4)
Distance from the coast	0.00039***	0.00031***	-0.00001	0.00001
	(0.00009)	(0.00008)	(0.00010)	(0.00009)
Country fixed effects	Yes	Yes	Yes	Yes
Individual controls	No	Yes	No	Yes
Number of observations	19,913	19,913	5,409	5,409
Number of clusters	185	185	62	62
R-squared	0.16	0.18	0.19	0.22

Notes: The table reports OLS estimates. The unit of observation is an individual. The dependent variable in the Asiabarometer sample is the respondent's answer to the question: "How much do you trust your local government?". The categories for the answers are the same in the Asiabarometer as in the Afrobarometer. Standard errors are clustered at the ethnicity level in the Afrobarometer regressions and at the location (city) level in the Asiabarometer and the WVS samples. The individual controls are for age, age squared, a gender indicator, education fixed effects, and religion fixed effects. ***, **, and * indicate significance at the 1, 5, and 10% levels.

Evidence without Historical Data II

	Inter-group trust				
	Afrobarometer sample		WVS non-Africa sample		WVS Nigeria
	(1)	(2)	(3)	(4)	(5)
Distance from the coast	0.00039***	0.00037***	-0.00020	-0.00019	0.00054***
	(0.00013)	(0.00012)	(0.00014)	(0.00012)	(0.00010)
Country fixed effects	Yes	Yes	Yes	Yes	n/a
Individual controls	No	Yes	No	Yes	Yes
Number of observations	19,970	19,970	10,308	10,308	974
Number of clusters	185	185	107	107	16
R-squared	0.09	0.10	0.09	0.11	0.06

Notes: The table reports OLS estimates. The unit of observation is an individual. The dependent variable in the WVS sample is the respondent's answer to the question: "How much do you trust <nationality> people in general?". The categories for the respondent's answers are: "not at all", "not very much", "neither trust nor distrust", "a little", and "completely". The responses take on the values 0, 1, 1.5, 2, and 3. Standard errors are clustered at the ethnicity level in the Afrobarometer regressions and at the location (city) level in the Asiabarometer and the WVS samples. The individual controls are for age, age squared, a gender indicator, an indicator for living in an urban location, and occupation fixed effects. ***, **, and * indicate significance at the 1, 5, and 10% levels.

Internal vs. External Determinants of Mistrust

Ethnicity-level colonial controls	Yes	Yes	Yes	Yes	Yes
Baseline controls	Yes	Yes	Yes	Yes	Yes
Country fixed effects	Yes	Yes	Yes	Yes	Yes
Number of observations	12,827	12,203	9,673	12,513	15,999
Number of clusters	146 / 1,172	145 / 1,130	147 / 725	147 / 737	147 / 1,127
R-squared	0.37	0.37	0.12	0.12	0.12

Notes: The table reports OLS estimates. The unit of observation is an individual. Standard errors are adjusted for two-way clustering at the ethnicity-based ethnicity level and at the location-based ethnicity level. `Average slave export measure among other ethnicities in the same location' is the average slave export measure of respondents in the Afrobarometer survey living in the same village, district or region as the respondent. The 'Five public goods fixed effects' are for the existence of the following public goods in the respondent's town/village: school, health clinic, sewage, piped water, and electricity. See table 3 for a description of the baseline controls, the ethnnicity-level colonial controls, and the colonial population density variables. ***, ** and * indicate significance at the 1, 5 and 10% levels.

Internal vs. External Determinants of Mistrust

	Trust of relatives	Trust of neighbors	Trust of local council	Intra-group trust	Inter-group trust
	(1)	(2)	(3)	(4)	(5)
Ethnicity-based slave export measure (baseline measure)	-0.155***	-0.182***	-0.100***	-0.169***	-0.090***
	(0.029)	(0.029)	(0.023)	(0.033)	(0.030)

Baseline controls	Yes	Yes	Yes	Yes	Yes
Country fixed effects	Yes	Yes	Yes	Yes	Yes
Number of observations	15,999	15,972	15,221	15,931	15,773
Number of clusters	146 / 269	146 / 269	145 / 272	146 / 269	146 / 269
R-squared	0.13	0.16	0.20	0.16	0.12

Notes: The table reports OLS estimates. The unit of observation is an individual. Standard errors are adjusted for two-way clustering at the ethnicity-based ethnicity level and at the location-based ethnicity level. 'Ethnicity-based slave export measure' is our baseline measure of slave exports used throughout the paper; it is the log of the number of slaves taken from an individual's ethnic group (normalized by land area). 'Location-based slave export measure' is our alternative measure of slave exports, which is the log of the number of slaves taken from the location where an individual is currently living (normalized by land area). See table 3 for a description of the baseline controls, the ethnnicity-level colonial controls, and the colonial population density variables. ***, ** and * indicate significance at the 1, 5 and 10% levels.
